Abstract (en)  
[origin: US2003052036A1] The present invention provides a container which has multiple protective characteristics integrated into the container. The protective container for containing a material and protecting against adverse exposure to the material includes a durable outer casing; an inner casing in direct contact with the material, which is less durable than the outer casing; and at least one layer of a preventative agent disposed between the inner and outer casings for disabling the material upon failure of the inner casing. The protective container provides improved active control to prevent accidental adverse exposure to the container contents.
