Abstract (en)

[origin: WO0197661A1] The invention concerns security support for display article, in particular wristwatches, designed to be integrated in a display unit (30) and comprising a sensor (7) fixed on the base (10) and connected by a conductor wire (12) to a connector (12) linked to an alarm central station. Said support consists of a globally cylindrical block (2) whereof the side surface is truncated along a chord (3) to form a plane (4) whereon is fixedly mounted a mechanical locking member (5) adapted to co-operate removably with corresponding parts (6) of the sensor (7) fixed at the base (9) of the watch (10), such that the latter thus equipped with the sensor (7), can be mechanically locked on the cylindrical block (2) by the locking member (5) and can be locked on that same block by winding of its own bracelet (13) and by closure of its clasp (14).
