Abstract (en)

[origin: WO0197773A1] The invention concerns a physiologically acceptable solid emulsion, in particular cosmetic, containing an aqueous phase and a liquid fatty phase dispersed, one in the other, said liquid fatty phase being structured by at least a polymer having an average mole weight from 1000 to 30000, comprising (a) a polymeric skeleton, having hydrocarbon repeat units provided with at least a heteroatom, and b) pendant and/or terminal fatty chains optionally functionalised, having 12 to 120 carbon atoms and bound to said units, the aqueous phase, the liquid fatty phase forming a physiologically acceptable medium. Said composition is in particular in the form of a cast make-up base, whereof the application results in a natural, fresh and long-lasting deposit.
