Abstract (en)

[origin: WO0200311A1] The invention relates to a device (10) for training a sequence of movements for ball hitting implements (18), especially golf clubs and baseball bats, which makes it possible to monitor the observance of the correct sequence of movements (20) with the implement by means of a monitoring device (20) acting upon the implement (18) and the user. Said device makes it possible for the individual user to be in a position to check whether a sequence of movements is being correctly performed while he or she is executing said sequence of movements and to correct it if necessary.
