Abstract (en)
[origin: WO0181020A1] The invention concerns a device for continuously cleaning and removing grease from kitchen extraction and ventilation circuits and any conduit likely to be clogged with organic deposits through cooking or industrial processes, and for neutralising odours at the outlet of exhaust ducts by generating an extremely fine mist consisting of water and specific selected products (a combination of essential oils, volatile oils (8)) in active form to be dispersed homogeneously in the conduits and ducts. The invention also concerns a water treatment device (1) acting on carbonates, a feed pump (2) for product (8) and treated water, a high pressure pump (3), a heating discharge (7) of high pressure hoses (4), adapted nozzles (5), a control unit (6).
