Abstract (en)
[origin: WO0202306A1] The invention relates to flap cases for cigarettes, consisting of a case element (12) and a cover (13), said cases being fitted in various ways with a closing accessory for the cover (13). The closing accessory comprises hooking bodies which are to be meshed with each other, namely a cover inner tab (16) and a collar-shaped front side (17). In order to guarantee operativeness as soon as the packaging is used, it is ensured that the closing accessory is already meshed by the time said packaging is finished, i.e. before it is used for the first time. To this end, the cover (13) is partially opened when it is virtually finished and is then placed back in the closing position, thereby ensuring the meshing of the closing bodies.
