Abstract (en)

[origin: WO0192126A1] The invention concerns a closure system for sealed closure of a reservoir (50) of a freeze-dried product dispenser, characterised in that it comprises a closure element (1) including a fixing part (10) sealingly co-operating with the reservoir (50) and a closure part (11) including a radial diaphragm (11) provided with a slot (12), the interference between said closure part (11) and said reservoir (50) being nil or quasi-nil, such that the slot (12) opens on one side or the other when pressure is exerted on any one side of said closure part (11), said slot (12) being sealingly closed in the absence of such pressure.
