Abstract (en)
[origin: WO0198427A1] The invention relates to a hot-melt contact adhesive, containing at least one unsaturated polymer and a particulate inorganic compound which has an average particle diameter d50 of between 0.05 and 300 μ m. The invention also relates to a method for producing the same and to the use of inorganic particulate compounds of this type for producing a hot-melt contact adhesive. In addition, The invention relates to adhesive objects which are produced using a hot-melt contact adhesive of this type.
