Abstract (en)

[origin: WO0203061A2] The invention relates to a method for identifying substances which are suitable to be used as medicaments for treating virus infections or for testing the effectiveness of such substances. The invention also relates to the use of a corresponding method for observing the infection route and/or the infection mechanism of viruses in cells, especially viruses that are provided for gene transfers for gene expression or as vectors and/or for gene therapy.
