Abstract (en)  
[origin: WO0202894A1] The invention relates to a vehicle door closure comprising a door lock containing a closing element, an outer opening handle (4) pivotally mounted in a holding plate or handle shell of the vehicle door, a coupling element (6) connecting the door lock to the outer opening handle and a connecting device (7) that connects the coupling element (6) to the outer opening handle (4) and compensates for tolerances between the door lock and the outer opening handle (4). The connecting device (7) is arranged in the coupling element (6) in such a way that it can be moved longitudinally and connected to the coupling element (6) in a positive or non-positive fit manner during assembly of the outer opening handle (4), the connecting device (7) being locked on the coupling element (6).
