Abstract (en)
[origin: US2003012018A1] The invention relates to a lighting element (1), comprising at least one light source (4) and at least one base element (2) which is at least partially provided with a translucent material. The lighting element (1) can be freely put up and the at least one light source (4) is disposed within the base element (2). The lateral surfaces of the lighting element (1) are preferably completely provided with said translucent material, for example a PVC film, so that the light sources (4) within the lighting elements (1) are not visible from the exterior. The individual lighting elements (1) can be easily interconnected via suitable plug-in connectors (5, 8) so that the lighting elements can be simultaneously used as pieces of furniture, for example as room dividers.
