Abstract (en)

[origin: WO0201207A1] The present invention relates to a method for inspecting packagings for liquid medium, such as glass bottles optionally filled with beer or other drink, wherein the packagings are moved in line at predetermined speed and/or predetermined mutual spacing, and wherein images of the packagings are recorded by a number of cameras disposed adjacently of or successive to each other, and these images from the different cameras are combined in order to detect foreign substances therein.
