Abstract (en)

[origin: WO0201590A1] The invention relates to connecting bars (4) made from profiled semifinished products and having a cavity, said bars having the same outer dimensions for different nominal currents and being intended for connecting the electrical components of electrical devices and apparatus to an external electrical circuit, wherein the connecting bars extend through the window opening located in the wall of the devices or apparatus and are fixed in the housing by fixing means consisting of two or more partial parts (11, 12) embodied as profiles, which are configured in such a way that they can be connected to one another by positive fit or otherwise to a hollow connecting bar (4). The partial parts (11, 12) have one or several legs (13; 16; 17), the length of which defines the height of the connecting bar (4).
