Abstract (en)
[origin: WO0203692A1] The invention concerns a videoconference terminal (1, 2) comprising image restoring means comprising a display (10, 20) arranged substantially horizontally, and preferably having the shape of a well seat closed at one of its end by the display (10, 20), thereby enabling a large number of users to distribute the space around the display, and to make the terminal an original and convivial communication equipment dedicated to informal communications between users distant from one another.
