Abstract (en)  
[origin: WO0203761A1] The invention concerns a mobile illuminating device (1) comprising a housing with elongated shape along a longitudinal axis (X-X), including: an assembly of illuminating elements, in the form of light-emitting diodes (5) (LED), fixed on a support plate (4); electrical/electronic control means and/or for electrical connection between the illuminating elements and a power source, a housing (1) comprising a window (24) located opposite the illuminating elements. The invention is characterised in that it comprises a transparent material protective plate (25) covering said window (24) opposite the illuminating means.
