Abstract (en)

A toy is built up with freely connectable parts to embody a modeled figure, so that a player is trained to employ his or her thinking and imagination in the process of building up the modeled figure. The connectable parts include a piece of body part (11) provided with first slits (17) having a predetermined depth, and two pieces of arm parts (13) and two pieces of leg parts (15), each being provided with at least one second slit (18) for suitably engaging with one of said first slits and thereby connecting the arm and the leg parts to the body part to form the modeled figure. The body part and the leg parts are also provided with third and fourth slits (19,110), respectively, so that two modeled figures may be stacked by engaging the third slit on a first modeled figure with the third or the fourth slit on a second modeled figure. <IMAGE>
