Abstract (en)  
[origin: EP1297969A2] Sheet collation apparatus is disclosed in which an initial sheet (A1) from a sheet feeder (4) is advanced to a collation station (10), reversed into an accumulation station (8) and then returned to the collation station where it is collated with the next sheet (A2) from the sheet feeder. This process may be repeated any number of times to form a collation of sheets of any required number. <IMAGE>
