Abstract (en)  
[origin: EP1298195A1] Dosing of active compositions is effected using a water-insoluble container with  $\geq 2$  hollows containing the active composition and each hollow covered with a separate water-insoluble protective film, the dosing process involving removing at least one of the separate films and contacting the container with water or an aqueous solution so as to release the active composition. <??>Independent claims are also included for <??>(i) water-insoluble containers having actives-containing hollows closed by protective films, there also being a water-soluble film between the insoluble protective film and the container; and <??>(ii) a kit of parts including the container and a fixing device.
