Abstract (en)

Method and device for raising or grinding fabrics (20), wherein the device comprises a plurality of raising/grinding cylinders (18, 118) associated with at least one drawing cylinder (12) at inlet and at least one drawing cylinder (13) at outlet, which are able to define the winding tension of the fabric (20) on the raising/grinding cylinders (18, 118); each drawing cylinder (12, 13) comprises at least two parts (12a, 12b; 13a, 13b) able to be driven independently of the other, and to cooperate with a relative fabric (20), or with a different face (21, 22) of the same fabric (20), in order to make it wind with a desired tension on at least one of the raising/grinding cylinders (18, 118). <IMAGE>
