Abstract (en)  
[origin: WO0201114A1] The invention relates to an oven comprising illumination (2) for a cooking compartment. Said illumination is continuously reduced by a dimmer device (22) of a control unit (8), not in an immediate manner, but over a period of time in which the user optically perceives the weakening illumination. In a preferred embodiment, the light intensity is also continuously increased upon switching on the cooking compartment illumination.
