Abstract (en)  
[origin: WO0163263A1] The invention relates to a component comprising a plurality of fiber elements and sample molecules of a selected sample molecule species or of selected sample molecule species groups, said sample molecules being immobilized on said fiber elements, whereby a specific sample molecule species or sample molecule species group is assigned to each fiber element. The invention is characterized in that the sample molecules are immobilized on outer surfaces of the fiber elements, and in that a supporting element fixes the fiber elements in an interspaced manner and in a radial direction with regard to the fiber elements or the fiber elements are bundled together with linear contact.
