Abstract (en)

[origin: WO0190858A1] An electronic mobile data communication device for storing information related to a holder of the device and communicating such information to a requester in a data network via a host computer. The device comprises electric energy supply means, data input means, data processing means, data storage non-volatile memory means and data transceiver means in operative connection. The data storage means has a number of programmable memory locations for storing the information to be communicated as a structured collection of data. On acknowledgement by the holder, the transceiver means, is adapted to automatically transmit selected pieces of the data to the requester.
