Abstract (en)

[origin: WO0201835A2] The invention concerns a button (13) for navigating among a plurality of functions provided on a display screen (10) of an electronic apparatus (1), said apparatus comprising a support (9) for receiving a connector (11) including a mobile element (11a) adapted to move along at least one direction. The button is configured so as to be kinematically linked with the mobile element (11a) when it is set in the apparatus and comprises coupling means for coupling the button with guide means of the apparatus thereby providing the button with the degrees of freedom required for operating the connector mobile element.
