Abstract (en)
[origin: EP1300223A2] The band steel tool has a plate (1) of sandwich formation with a tensioned elastomer intermediate layer (4) between two shape-stable cover plates (3) and in which band-shaped stamp blades (2) are held. The stamp blades are inserted in slots of the cover plates and the intermediate layer. Through tension, the intermediate layer is elastically deformed, exerting a clamping effect on the stamp blades. <??>The cover plates are tensioned against one another by connections (5) distributed over their surfaces, between the cover plates distance components (6) are arranged, which are casings secured by bolts of the screw connections.
