Abstract (en)

[origin: EP1300344A1] The holder (1) consists of first and second supply containers (2, 2') attached to a plate (10) equipped with a mobile distributor (30) that can be switched from a position in which the containers are isolated from the distributor outlet (32) to a position in which they are both connected to it. The movement of the distributor opens two plugs (59, 59') separating the containers from the outlet, with a tamper-proof ring (31) preventing the distributor from being opened without it showing.
