Abstract (en)

[origin: EP1300502A1] Device for ironing fabric articles, like clothing, comprising a housing with handle, a soleplate to be heated electrically arranged under the housing and a water reservoir which is arranged if necessary in the housing and which communicates via a controllable supply opening with a chamber for forming steam bounded by the soleplate, wherein the soleplate is provided with apertures connecting to this steam chamber and wherein controllable means are arranged around or in the housing to extract the steam, wherein the extraction means are in direct communication with the steam chamber via a discharge duct, whereby a better control of the steam use and consumption is obtained.
