Abstract (en)

[origin: EP1300515A2] The built-on component (1) for the track support (2) of a magnet suspension railway accommodates functional components and is formed as a U-profile with two U-legs (3,4) and a U-base (5). It is fixed with a U-leg directly to an upper side surface of the track support and has a length of at least four meters. As functional components, stator packets (6) are fixed to the built-on component. <??>The built-on component also has as functional components a side guide rail and/or a slide strip plane for the suspension railway. The U-profile is a roller profile. The U-legs are connected to each other by connecting components (7) which extend along the built-on component and the track support specifically spaced apart. The stator packets are fixed to the connecting components.
