Abstract (en)

[origin: DE10149408C1] Device for fixing border rails, especially as skirting boards, comprises a mounting rail (3), an intermediate rail (4), and a border rail (2). The mounting rail and the border rail are each connected to the intermediate rail using a socket connection (5, 6). The socket connection is designed so that the border rail and the mounting rail are each connected to the intermediate rail in the same insertion direction. Preferred Features: The intermediate rail profiles (7, 9) are formed relative to the intermediate rail cross-section at least on end regions (22, 24) lying on opposite sides of the intermediate rail and pointing in opposite directions.
