Abstract (en)
[origin: EP1300643A2] The mobile drier consists of a drying chamber (3) to receive the material to be dried and a technical module with an air drier and ventilator between an intake and an outlet. The technical module and drying chamber are assembled in a single housing which has a duct (11) connected to the output of the technical module, the duct being partly deformable and inflatable by the pressure of air (21) passing through it, and partly rigid to direct the air through outlets (12) towards one of the chamber's walls, which are made from an insulating material.
