Abstract (en)
The system for preparing letters for posting includes use of a first standard printer, connected to a computer terminal, for printing the address, postal co-ordinate data and the required service on the outside of an envelope. This computer is connected to the Internet, and thus also establishes connection with a remote server, enabling the authentication of a franking stamp to be applied to the envelope. This is applied by a second secure printer, after the initial information has been applied to the envelope. <??>The system for preparing articles to be posted includes use of a postal stamp marking, and further marking representing the service associated with the article to be posted, as requested by the user. The system includes a first standard printer (14) connected to a computer user terminal. This computer user terminal is itself connected, via the Internet (10), to a computer server (16) hosting the website of a independent organization for the preparation of articles for posting. This enables the printing of both postal co-ordinates of the destination, and the marking of the service required. A second secure printer comprises a franking machine (20) which then applied the postal franking mark.

Abstract (fr)
Système de préparation d'articles de courrier comportant à la fois une empreinte postale et un marquage de service représentatif d'un service associé à cet article de courrier et demandé préalablement par un utilisateur, ce système comportant des premiers moyens d'impression standards (14) reliés à un terminal informatique de l'utilisateur (12) lui même relié, au travers d'un réseau Internet (10), à un serveur informatique (16) hébergeant le site WEB d'un tiers chargé de la préparation des articles de courrier, pour imprimer à la fois des coordonnées postales du destinataire et le marquage de service. Des seconds moyens d'impression sécurisés constitués par une machine à affranchir (20) sont en outre prévus pour imprimer l'empreinte postale. <IMAGE>
