Abstract (en)

[origin: EP1300911A1] The connection mechanism (600) connects to a regulating block. The container (601) is mechanically fixed without cabling or decabling on the regulator surface. There is a connector (602) connecting the connection mechanism to an equipment. A switch connects the connector establishing a temporary connection between a line part of the regulator block and the other part of the connector equipment. There is a connection fixed to the container and connecting to the switch connecting two lines of the switching regulator and establishing cabling contacts of the container to the regulator block.
