Abstract (en)

[origin: WO0205623A1] The invention relates to a potato planter comprising a transport system comprising at least one transport device of the first kind (6A, 6B) at least one transport device of the second kind (8A, 8B) the transport device of the first (6A, 6B) kind being arranged for receiving potatoes from a storage hopper (10) and transporting these potatoes to the transport device of the second kind (8A, 8B), the transport device of the second kind planted in the driving direction of the potato planter at a uniform mutual distance, the transport device of the first transport direction (6A, 6B), and the transport device of the second kind (8A, 8B) being arranged for transporting potatoes received from the first transport device in a second transport direction to the respective locations where the potatoes are to be planted an angle included between the first transport direction and the second transport direction. The transport system, being provided with passage means (24A) arranged for interrupting the feed-through of potatoes from the transport device of the first kind to the transport device of the second kind.
