Abstract (en)

[origin: WO0164305A2] An interactive wagering application is provided that allows users to place wagers wirelessly. Users may use wireless user devices in the home to communicate with in-home user equipment such as a set-top box or personal computer. Wagers may be created using the wireless user devices and submitted to computer equipment for processing over a wireless link with the in-home user equipment and a communications network. The system may support multiple users. Users may use wireless user equipment that communicates with the communications network. The wireless user equipment may use protocols such as the wireless application protocol to allow the users to submit wagers.
