Abstract (en)  
[origin: WO0183226A1] The invention relates to a self-inking stamp with inking from the top. Said stamp comprises a bottom part (1) which can be placed on the surface to be stamped (1), a turning mechanism (W) for a printing plate support which is situated in the bottom part and which can be moved back and forth between an ink pad (4) and a set-down frame (A) while turning; and a top, actuating part (2) which can be displaced in relation to the bottom part against a spring force and which is connected to the bottom part by its side parts (2"), by a turning pin of the printing plate support which passes through the narrow side walls of the bottom part in longitudinal holes (12). The top, actuating part is connected to the bottom part by lateral elastic snap-in connections (7, 8) and has side snap-in receptacles (9) at its bottom end. Said receptacles can be caused to engage with turning pin stubs of the printing plate support which is introduced into guiding slits of the bottom part.
