Abstract (en)
[origin: WO0207123A1] According to the invention, data of several sensors (PIC1, PIC2) is transmitted to a control device (1) via a data bus (6), whereby a data relevance value is established in the sensor (PIC1, PIC2). Said data relevance value of the sensor (PIC1, PIC2) is stored on the bus (6) and only one single largest value of at least sensor (PIC1, PIC2) is transmitted to the control device (1).
