Abstract (en)

[origin: WO0207177A1] The invention relates to a switch device (1) for an electrical appliance, comprising an electrically conductive layer (11) which is arranged on a switch mat (7). An electrostatic discharge which is applied to a key (2) is branched off by the electrically conductive layer (11) into a housing (3) pertaining to the electrical appliance. Said electrically conductive layer (11) is especially cheap to produce.
