Abstract (en)

[origin: EP1302575A2] An air or water jet loom is fitted with a jacquard on which the hook and knife mechanism has been replaced by individually controlled electrical actuators. The shed is controlled so that it closes gradually across the width with the angular rotation of the loom, beginning at the weft entry point and ending at the exit. <??>Preferred Features: Control of the shed extends over 60 degrees rotation of the main loom drive shaft, starting at 290 degrees and ending at 350 degrees .
