Abstract (en)

[origin: EP1302580A2] Device for supporting the temple and associated cover in a terry cloth loom with movable bench equipped with a selvedge device, of the type in which the support for said temple is mounted on a slide movable longitudinally in a direction parallel to the warp yarns and connected mechanically to the movable bench by means of a connecting rod. The cover of said temple is supported, independently of the temple support, by means of a pair of articulated rods, the first of said rods being connected to a part of the loom arranged above the cover and the second of said rods being connected to a second support integral with said slide and arranged downstream of the temple with respect to the forward direction of the fabric. <IMAGE>
