Abstract (en)
[origin: EP1302741A1] Munition (1) comprises an explosive charge (2) inside a casing (3) around its axis (4), divided into two or more sectors (3a, 3b), one of which is designed to create fragments when a detonator (7) adjacent to the opposite sector is set off. <??>Preferred Features: The casing is made from at least two adjoining shells (8a, 8b), one covering an angle of 180 degrees or less, and made from a material such as steel or tungsten that breaks into fragments, and the other of a different material, such as a plastic or composite material or aluminum.
