Abstract (en)
[origin: WO0203823A1] A shoe cover application device (100) having a holding member for holding a shoe cover open in a receiving position to accommodate the insertion of a user shoe. The shoe cover application device (100) also includes a separation member (85) that separates the shoe cover (310) from the holding member allowing the shoe cover to constrict around the user's shoe inserted into the shoe cover (310) while the shoe cover was in the receiving position. Shoe covers of various materials, shapes and sizes may be used with the shoe cover application device of the present invention.
