Abstract (en)  
[origin: WO0207899A1] The invention concerns a station (10) comprising at least two zones (11, 12) cleaning/filling a reservoir, capable of receiving each a subassembly (7) consisting of a reservoir (8) and a sprayer (9) while said subassembly (7) is not secured to the robot. Means (51, 52) are provided for cleaning and/or filling the reservoir and/or the sprayer in each of said zones, while said zones (11, 12) are adapted to be brought (F2, F3) in a position to be connected to a subassembly (7) arranged in one (11) of them with cleaning and/or filling means (51, 52). The method consists in, inter alia, positioning (F6) a coating product supply unit (52) in a position for connection with the first subassembly (7) received (11) in a zone (11) of the cleaning/filling station.
