Abstract (en)

[origin: WO0204205A1] This invention relates to a solid composition transferred by means of polyester. The solid composition transferred by means of polyester comprises: a molded material base layer having a plane shape; a polyester compound layer located on the upper surface of the molded material base layer, impregnately coated and equally mixed with polyester and a pigment member; a single printing layer located on the upper surface of the polyester compound layer, having a specific pattern and color. The solid composition transferred by means of polyester in accordance with the present invention prints a specific pattern by mixing polyester and various pigment members upon the taste of users on the upper surface of the base layer having various shapes, thereby providing a plane or a cubic molded material having excellent color tone enough to satisfy the taste of users and does not use an adhesive layer or a demolding layer, thereby making the manufacturing process simple enough to maximize the efficiency for producers.
