Abstract (en)

[origin: WO0207974A1] The invention relates to a method for regulating the tension (52, 53, 55, 56, 57) of a web in a rotary press comprising at least one printing group (06, 07, 08, 09) that is provided with at least one first and one second cylinder between which a web is tensioned, whereby both cylinders are driven by at least one drive mechanism. The distance (a) between both cylinders is altered for the purpose of influencing the tensions of the web in front of, between and after the printing groups.
