Abstract (en)
[origin: WO0207977A1] The invention relates to a device for fixing a sheet on the surface of an electrically conductive cylinder of a sheet-fed printing machine, especially sheet-fed offset printing machines. Said device comprises an electrode that extends along the entire width of the cylinder. A sheet located on the surface of the cylinder can be fed between said electrode. The invention aims at improving said device with the purpose of ensuring easy and reliable sheet guidance and enhanced printing quality. According to the invention, this is achieved in that a device (3, 5, 6, 7, 8) which feeds an air flow to the sheet located on the surface of the cylinder (GD) is mounted in front of the electrode (2) in the direction of advancement of the sheet.
