Abstract (en)
[origin: EP1304441A2] The door has a standing panel and entrance panel fixable by a locking mechanism. The two panels each have swivel arms with slide members. The slide member (2) of the standing panel controls a slider (4) which releases or blocks the locking mechanism which comprises a detent pawl (5) which in the released state is displaceable perpendicular to the direction of movement of the slider (4) by the entrance panel slide member (3) and in the blocked state stops movement of the latter. <??>The slider (4) can be under the action of a spring and is movable in the longitudinal direction of the slide guide (1).
