Abstract (en)

[origin: EP1304539A1] The method involves displaying a target image and a target mark representing the end of the projectile's trajectory. Coarse alignment of the barrel (B) is performed in a first phase. In a second phase with a fixed barrel aiming is carried out by sighting the target image using the image display unit (V), whereby the target image and target mark are brought into best alignment. Fine aiming is performed in a third phase. <??>An Independent claim is also included for a device for aiming a weapon barrel.
