Abstract (en)  
[origin: US2004134098A1] The invention relates to an inner or inlay sole (2) for a shoe, in particular a sports shoe, which permits optimal damping properties and optimal wearing comfort. The above inner sole (2) is constructed in an integral manner from a flexible material and comprises blisters (6). According to a preferred embodiment, the blisters (6) are hollow in form in order to meet the requirement particularly well. According to a further embodiment, perforations (20) are provided in the region between the blisters and/or in the blisters themselves, for the optimisation of the damping properties and for removing fluids from the foot of the user. A combination of the two embodiments is particularly advantageous.
