Abstract (en)
[origin: WO0213756A1] The control device for doses contains one or more sockets (1) for a removable medicament dosage unit (3), one or more indicators (2) of taking the dosage unit (3), and one or more lifters (4) for lifting the dosage unit located in the socket (3). The control device is especially well suited for monitoring the administration of doses intended for treatment of diabetes. The sockets (1) are vertical or sloping tubes protruding from the body of the control device, in which injection pens containing insulin can be placed.
