Abstract (en)
[origin: WO0210021A2] The invention relates to a method and a device for packaging a block of material consisting of a compressible material. According to said method, a block of material is compressed by bringing together two compression units (120, 122) and in its compressed state is either pushed against a stretched film web and enveloped by the same, or alternatively the film web is pushed against the block of material and pulled over the latter. The ends of the film web are welded together.
