Abstract (en)

[origin: WO0210048A2] The invention relates to an elevator car (1) comprising especially, a support frame (8) of a cable-driven elevator system without a machine room, with a compact driving pulley driving machine (7), combined with a brake, integrated in this car (1) and/or its support frame (8). The aim of the invention is to provide an elevator car of this type which can be preassembled outside of an elevator shaft as a unit ready to be installed, with as many functional parts as possible. To this end, the inventive elevator car (1) is characterised by the following features: the driving machine (7) is equipped with a permanent magnet-excited synchronous motor as the driving source; the operating electronics of the driving machine and the control electronics required for the operation of the entire elevator system form a common, interactive functional unit in the form of an electronic central unit (10); and the electronic central unit (10) is permanently connected to the elevator car and/or its support frame.
